

CLASS-12  
CHAPTER-11  
THREE DIMENSIONAL GEOMETRY

## Exercise 11.2

Q1. Show that the three lines with direction cosines  $\frac{12}{13}, \frac{-3}{13}, \frac{-4}{13}, \frac{4}{13}, \frac{12}{13}, \frac{3}{13}, \frac{3}{13}, \frac{-4}{13}, \frac{12}{13}$  are mutually perpendicular.

**Solution:**

$$\mathbf{A} = \begin{pmatrix} \frac{12}{13} \\ \frac{-3}{13} \\ \frac{-4}{13} \end{pmatrix}, \mathbf{B} = \begin{pmatrix} \frac{4}{13} \\ \frac{12}{13} \\ \frac{3}{13} \end{pmatrix}, \mathbf{C} = \begin{pmatrix} \frac{3}{13} \\ \frac{-4}{13} \\ \frac{12}{13} \end{pmatrix} \quad (1)$$

Stack all three vectors into a single vector  $\mathbf{P}$ :

$$\mathbf{P} = \begin{pmatrix} \frac{12}{13} & \frac{4}{13} & \frac{3}{13} \\ \frac{-3}{13} & \frac{12}{13} & \frac{-4}{13} \\ \frac{-4}{13} & \frac{3}{13} & \frac{12}{13} \end{pmatrix}, \mathbf{P}^\top = \begin{pmatrix} \frac{12}{13} & \frac{-3}{13} & \frac{-4}{13} \\ \frac{4}{13} & \frac{12}{13} & \frac{3}{13} \\ \frac{3}{13} & \frac{-4}{13} & \frac{12}{13} \end{pmatrix} \quad (2)$$

Check whether all three vectors are orthogonal(perpendicular) to each other or not using:

$$\mathbf{P} \cdot \mathbf{P}^\top = \mathbf{I} \quad (3)$$

$$\begin{pmatrix} \frac{12}{13} & \frac{4}{13} & \frac{3}{13} \\ \frac{-3}{13} & \frac{12}{13} & \frac{-4}{13} \\ \frac{-4}{13} & \frac{3}{13} & \frac{12}{13} \end{pmatrix} \cdot \begin{pmatrix} \frac{12}{13} & \frac{-3}{13} & \frac{-4}{13} \\ \frac{4}{13} & \frac{12}{13} & \frac{3}{13} \\ \frac{3}{13} & \frac{-4}{13} & \frac{12}{13} \end{pmatrix} = \begin{pmatrix} 1 & 0 & 0 \\ 0 & 1 & 0 \\ 0 & 0 & 1 \end{pmatrix} \quad (4)$$

Hence, all three vectors are mutually orthogonal(perpendicular) to each other.
